Subject Healthcare reform consultation launches

Urgent Return receipt Sign Encrypt

Dear Sirs,

It's good to hear that the HKGov will try to ensure healthcare services remain accessible to the low-income and under-privileged groups. Hope it can be used by all the population in need, but the Gov should think more about the healthy environment that each one of the companies established in HK can offer to their worker. It is the main reason of many problems specially family ones.

Other thing is: why not use the money to prevent those kind of diseases in vain to spend it to cure it. It makes people feel, the bosses can mistreat physical and mentally to their workers and them because the company has bought an insurance for them, they can go to the doctor for treatment. Take into account that many of the foreigners small companies established in Hong Kong not buy insurance to their workers.

Educate people for a good and healthy working environment to prevent diseases (specially for that bosses that mistreat young chinese ladies) is a must.

Best regards,
WEAK888
